

How to use VMS Format Convert Tool

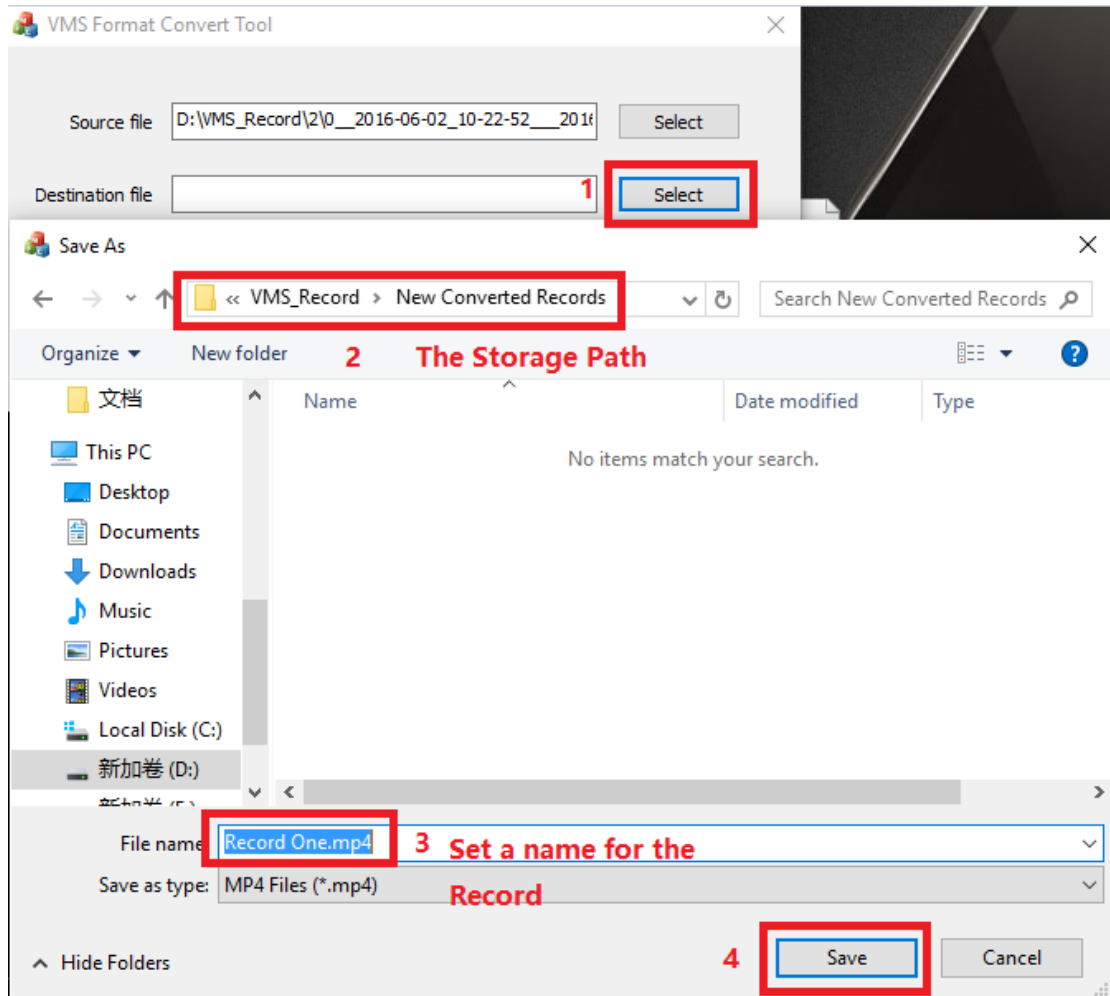

1. Extract the compressed file on the hard disk of the computer.
2. Double click to run "record2mp4.exe" (The Convert Tool).

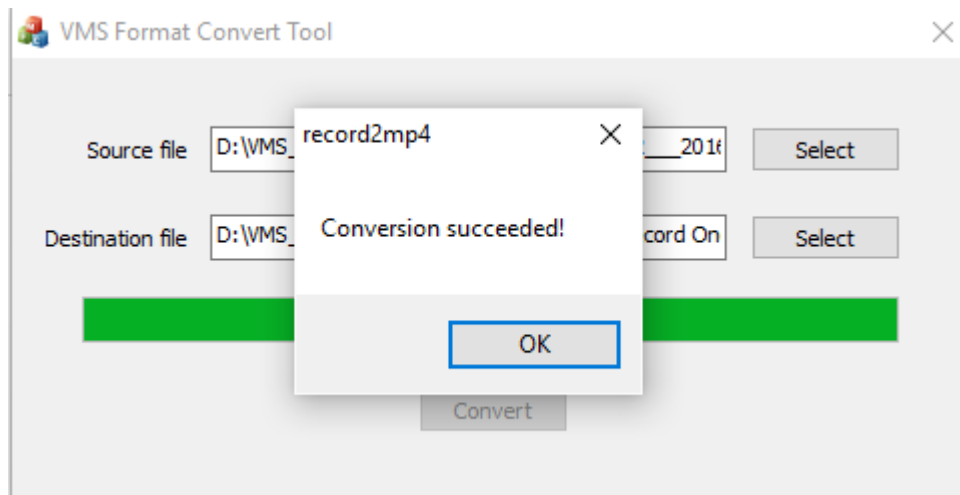

3. Click to select source file and choose the records files which format need converted.

4. Click to select Destination file, choose where the converted record will be stored, and set a name for the record name.

5. Click "Convert" to convert the records into MP4 format.

6. You can find the converted records in the storage path.
